## **TAKING CARE OF YOUR NEW TIMBER PRODUCTS**

As timber is a natural material it is important that during dry weather, and the first year after installation or during storage, that the panels are wetted down regularly as with a newly planted tree or shrub.

Treat your panels annually with one of the popular treatments we recommend or any similar water-based preservative.

Panels are delivered already dipped and treated. However, if you need to retreat to colour match, both sides of the panel must be treated as warping can occur due to the uneven application of treatment.

Large timbers such as posts will crack or split, this unavoidable.

It is impossible for us to guarantee our products against the movement of wood as this is a natural reaction to moisture loss and is obviously out of our control. We do however, endeavour to maintain the highest standards in the construction of our fencing, gates and timber buildings and trust that they will give you long and continued good service.
